CSS Documentation

Cyberdam 2.3

Plaats	Amsterdam
Datum	8 December 2011
Auteur	Simon Groenewolt
Functie	Technical Manager
Document	Cyberdam 2.3 css doc.odt
Versie	1.0

1   Introduction

This manual instructs how to style Cyberdam 2.3 using css.

2   CSS

2.1   Location

The main css can be found in `sources/web/themes/default/style.css`

Images used on the pages can be found in `sources/web/themes/default` and `sources/web/themes/default/img`

2.2   Making changes

Making changes to the style or images can be done by editing the css and/or images, creating a new war file and deploying that file. Alternatively changes can be made directly on the deployed version by locating the webapp and navigating to `<webappname>/themes/default` and making the changes in-place, depending on the setup of the webserver a reload of the application might be needed.

Tip: use the Firefox browser combined with the Firebug extension to test css changes on the website without having to edit the actual files.

2.3   Overview

Editing the styles for the tree-menu used in some places of the site can be done by editing the `menuExpandable.css` the contents of this file are self-explanatory.
The general styles in `style.css` are explained in comments in the file itself. Use Firefox+Firebug, the IE developer tools or the Google Chrome 'Inspect element' functionality to investigate specific situations on pages.
